Secure and fast remote access to your Windows computers and servers

Remote Desktop is a remote access solution for accessing RDP-based Windows computers and servers from anywhere, at any time. You can connect to your Windows computers and servers from any PC via the Remote Desktop viewer. You can also connect using Mac computers via any web browser.

With Remote Desktop, you get uninterrupted and secure remote access while avoiding the time-consuming configuration and costly maintenance involved with Microsoft RD Gateway. You can access your remote computers and servers behind a NAT gateway by installing the Remote Desktop agent and providing access permission to Remote Desktop.

Key features of Remote Desktop

24/7 Remote Access

Access your remote computers and servers anytime, and keep up with your business without any delay.

Multi-access Sessions

Stay remotely connected to your PCs / servers from multiple Remote Desktop viewers simultaneously.

File Transfer

Effortlessly copy-paste files and folders between your local and remote computers during remote sessions.

Multi-Monitor Support

Work with multiple monitors of your remote computer by switching between the monitors on your local computer.

Device Redirection

Use your local resources and devices such as drives, printers, smart cards, and video-capturing devices during the remote sessions.

End-to-end Encryption

End-to-end encrypted Microsoft RDP connection ensures your remote sessions are secure and private.

Remote Printing

Print documents, PDFs, images, and other files stored on your remote computers using your local printer.

Lock Remote Screen

Work on your remote computers in the lock-screen mode, ensuring total privacy from the remote end.

Access via Agent Installation

Install the agent to access your computers remotely and skip configuring Microsoft RD Gateway, VPN tunneling, and firewalls changes.

Two-step Verification

Configure a two-step verification process for your account and eliminate the risks of unauthorized access.

VPN Alternative

Work on remote files and programs without the expense and hassle of VPN installation and its bandwidth limitations.

User Management

Add users to your Remote Desktop account and manage their account rights via the web application.
